

Flintzy - Backend Developer Assignment

Create a SpringBoot application with MYSQL as the database for below problem statement.

Deadline: 7 days

Problem statement:

Create a social media management tool, when users can connect their social media channels such as Facebook pages, Instagram accounts, YouTube accounts, and publish posts from our APIs(website).

*all the APIs should be secured using JWT token

1. Implement Login/Signup APIs using facebook or google login (your choice)
2. Allow users to link their Facebook pages using Facebook graph apis
3. Publish a post on behalf of user on linked Facebook page using Facebook graph api
4. Update CURL requests in README file.

Submission:

- Create a github/bitbucket repository
- Create README and add steps to run the application
- Start committing on progress with proper commit messages Share it with (bhanu@flintzy.com) once your code is ready
- Add .sql file of your DB with Data to the repository

If you feel something is missed, make your own assumptions and mentioned them while submission.

If you have any doubts, please reach out on bhanu@flintzy.com or +91-9663649779
